# Bosch Superfit: The high performance lubricant that effectively prevents brake noise

Through sophisticated research and an extensive series of tests, Bosch has developed a new product - a permanent lubricant that prevents noise from occurring on disc and drum brakes, thus ensuring a long and reliable service life.

## Long term reliability

High performance lubricants for brakes need excellent durability and long term functionality. Bosch Superfit has plenty of advantages to offer:

- ▶ Extremely low oil separation
- ▶ Lower tendency to becoming pasty compared to other products on the market
- ▶ Excellent resistance to being washed off by water
- ▶ Resistant to extreme heat and cold

## Robust and neutral

- ▶ Metal free, acid free and non-conductive
  - ▶ Non-corrosive, compatible with all metals and most rubber materials
  - ▶ Ideally suited for both steel and aluminum brake calipers
- Bosch Superfit can also be used to assemble and protect compressors, central lubrication units, seat rails, sliding roof guides, door catch straps and battery terminals

## Example applications for Superfit

### Improved comfort properties

- ▶ **Problem:** Assembly with or without lubricants containing copper can lead to resonant vibrations and/or make it more difficult for the pads to return smoothly when the brake is released. Both of these can result in noise.
- ▶ **Solution:** Using Superfit on the guide surfaces and on the rear of the pads.
- ▶ **Advantage:** Noise prevention (e.g. squeaky brakes) and improves the return of the brake pads at the end of braking sequence.

### Protection against corrosion

- ▶ **Problem:** Environmental influences such as rain, road salt and dirt can cause corrosion.
- ▶ **Solution:** Superfit's excellent resistance to moisture helps prevent corrosion.
- ▶ **Advantage:** Superfit improves the durability of braking components. Importantly, Superfit is fully compatible with aluminium calipers. It doesn't contain any copper, which can react with aluminium.

Description	SNR
Packing unit: 12 x 100 ml tubes	5 700 015 025 (44N)
